SUMMARY

Senior software engineer and founder. I design, build and run web and mobile products end to end: new ones, stalled ones, and prototypes that need to become software a team can actually run.

PERSONAL PROJECTS

Moneysky moneysky.app

All your finances in one place. Aggregates European bank accounts, investments, and portfolios into a single dashboard, with AI categorisation and tax tools for freelancers and small businesses.

Tensen tensen.app

A dream journal with an AI interpreter attached: log what you dreamt, get a personal reading, and watch the patterns and recurring symbols build up over months. Guided programs and lucid dreaming practices on top.

PromptStor promptstor.app

A centralized prompt library that lives directly inside ChatGPT, Claude, Gemini, Perplexity, and Microsoft Copilot, so your best prompts are always one click away. It ships as a browser extension for Chrome and Firefox, with team collaboration for sharing and reusing prompts across an entire organisation.

Artist's Hero artistshero.com

A platform that connects emerging Czech visual artists with companies through flexible art rental and custom commissions, bringing original work into offices while channelling real income to local talent. Clients include Mercedes-Benz, Veolia, and CzechCrunch, with 130+ artworks placed and over 1.8M CZK paid out to artists.

SatuHati satuhaticharity.cz

A Czech charity, based in Prague and operating in Eastern Indonesia on the islands of Timor and Sumba, that improves living conditions for communities facing poverty and illness through healthcare support and medicine supply. Its name means "one heart", built on transparent, sustainable aid run with local partners.

EXPERIENCE

Ravineo

Jun 2026 – present

Full-stack developer

- Building the system that produces the company's quarterly reports end to end.
- Finishing the remaining MVP features and moving them into a production-ready state.

[Next.js](#) / [TypeScript](#)

Titans SK

Feb 2026 – present

Full-stack Laravel developer

- Migrating a legacy CakePHP GRC (governance, risk, and compliance) platform to Laravel.
- Owning core modules: user management, application settings, and a refactored authentication system.
- Building robust APIs, including SCIM, with automatic documentation for dynamic and custom fields.

[Laravel](#) / [CakePHP](#) / [SCIM](#)

Captiwate

Jul 2025 – Oct 2025

Full-stack Laravel developer

- Shipped a HubSpot integration that centralises visitor tracking, calls, and chat history for sales teams.
- Architected a LinkedIn integration that opened a new automated lead-generation channel.
- Added video and photo capture to the admin panel and widget, and built a credit system powering plan-based monetisation.

[Laravel](#) / [HubSpot](#) / [LinkedIn](#)

FTMO

Feb 2025 – Jul 2025

Senior backend developer

- Modernised the internal back-office with a new UI library, improving maintainability and user experience.
- Refactored legacy code for stability and performance while shipping new features to production.

[PHP](#) / [Laravel](#)

Gamee

2021 – 2025

Senior backend developer, Web3 gaming

- Boosted engagement for millions by optimising battle matching and launching daily leagues on a Web3 platform.
- Kept the Telegram bot API highly available and scalable for 250,000+ daily active users through heavy refactoring.
- Delivered critical features and security hardening, and defined Web2 and Web3 API specs with front-end teams.

[Web3](#) / [Telegram](#) / [Redis](#)

Internet-handel

2015 – 2021

Team lead & lead full-stack developer

- Led the Megaknihy.cz expansion into Slovakia and Poland, integrating logistics, price-comparison, and advertising APIs for multi-market parity.
- Drove conversion from 4% to 5%, a 25% lift, by leading A/B testing across design, collaboration, and data analysis.
- Built Dockerised microservices for product import and a proprietary product categorisation algorithm.
